WEBCON BPS

LOW-CODE

BUSINESS PROCESS AUTOMATION PLATFORM
FOR CITIZEN ASSISTED DEVELOPMENT

POWERED BY INSTANTCHANGE™ TECHNOLOGY

WEBCON BPS is a low-code process automation platform that allows you to build and run departmental and mission critical applications – without coding. It’s more than just no-code. It is a platform for IT departments and business process teams that makes citizen assisted development a reality. Cutting-edge **InstantChange™** technology revolutionizes delivery process and ongoing change management reducing time-to-business to a minimum.

WEBCON BPS is a low-code process automation platform that reduces the time and risk of software implementation projects by 70%.

It is designed for IT departments and Business Process teams of large and medium companies that need to continuously deliver enterprise-grade applications.

Deliver applications using agile, iterative, no-code methods that improve core business process effectiveness by 50% and deliver high ROI.

Digitalize, standardize and automate business processes, and coordinate tasks across departments and borders.

InstantChange™ technology

Delivering process automation applications is just the beginning.

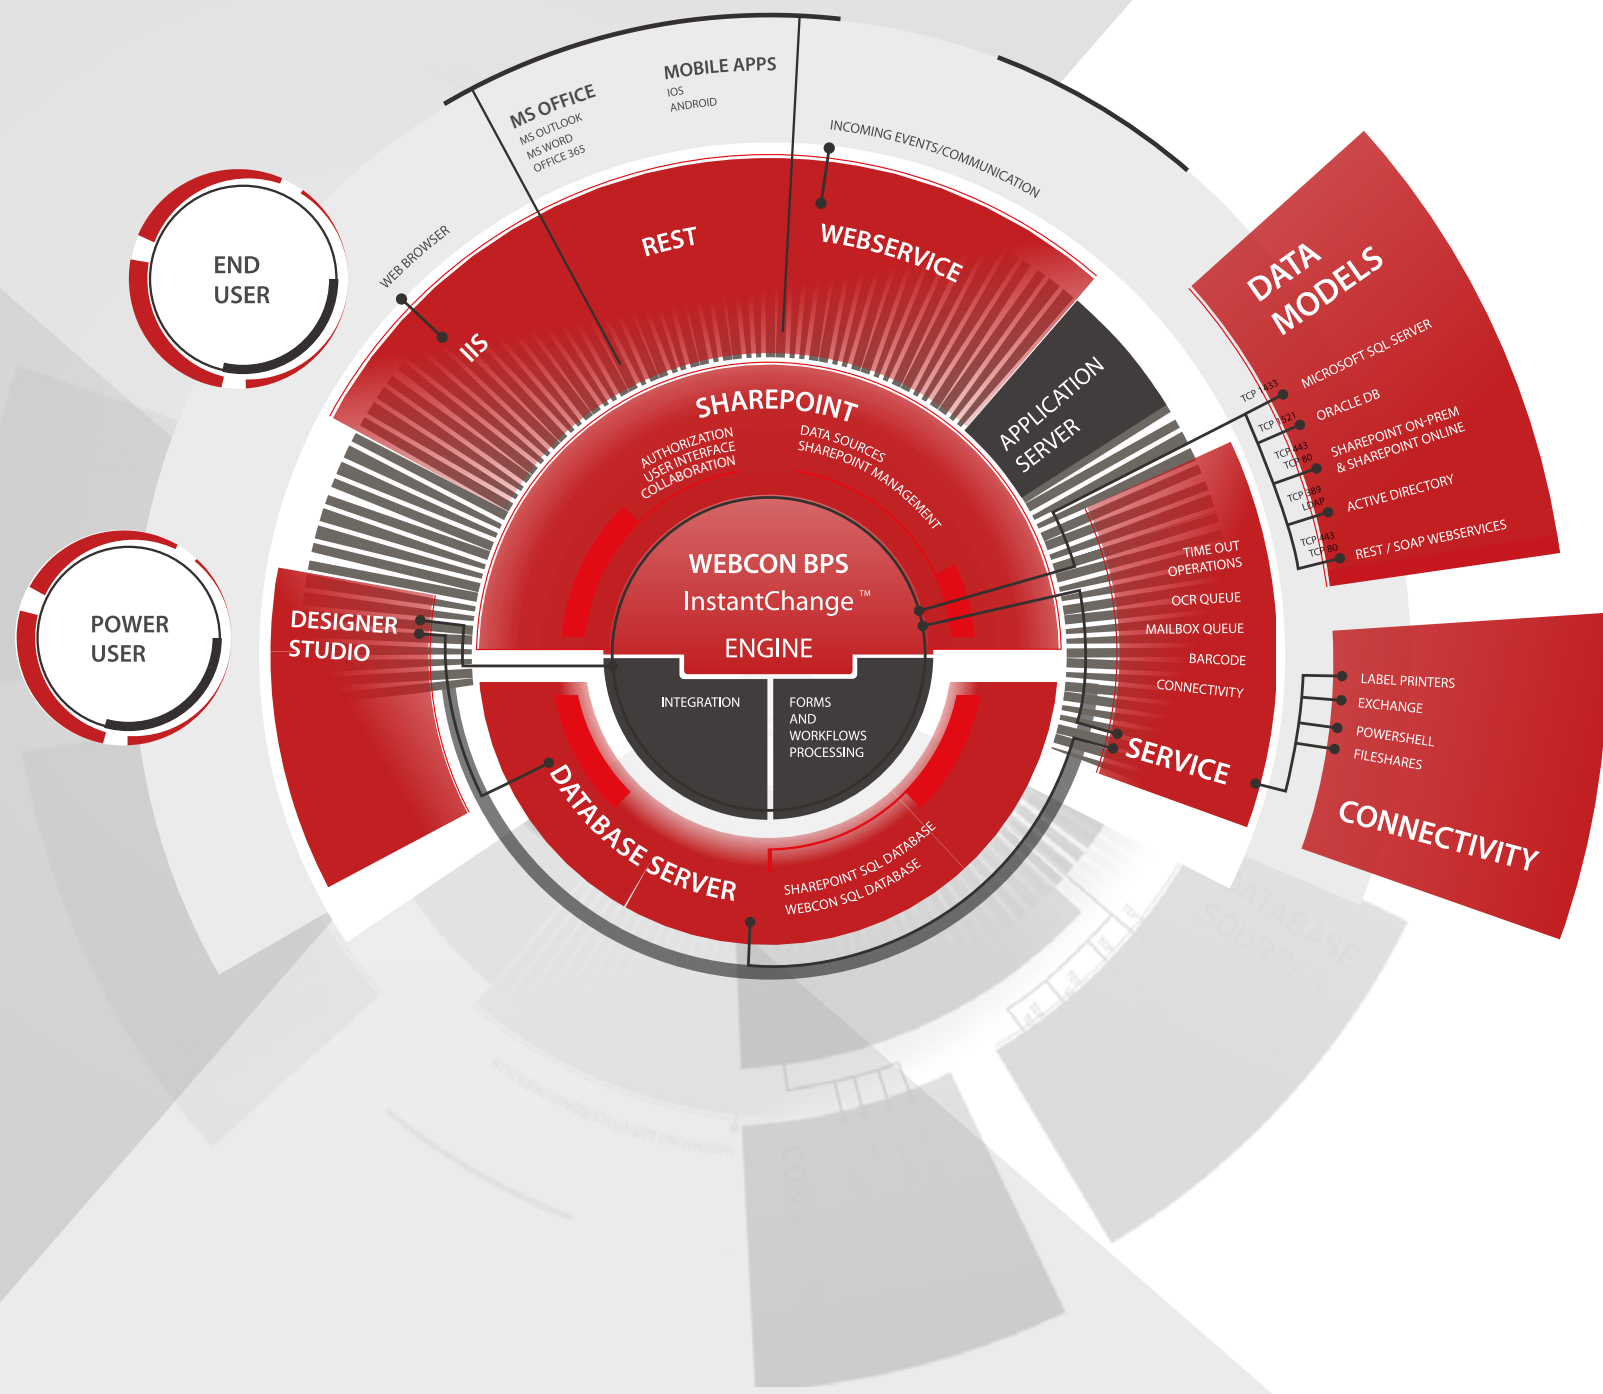

Most companies admit that scope creep and ongoing change management are their biggest challenges. **InstantChange™** technology ensures quickness of initial delivery and effortless adaptation to frequent changes that always follow.

How it works?

Whenever a change is requested, you simply drag & drop the new requirements into your application and hit "save". No deploying, no waiting – your changes are effective instantly, and there is no grandfathering of already running instances.

InstantChange™ technology is an integral part of:

- Workflow engine
- Business Rules engine
- Forms engine
- Integration engine
- Application staging engine

Low-code delivery

Don't be a hostage to custom code.

No-to-low-code means freedom of continuous development, higher security of investment, and delivering more with less. The powerful out-of-the-box features in WEBCON BPS make coding a thing of the past.

WORKFLOW & FORMS

Drag and drop complete applications using a graphical designer. No-code application delivery means quick time to business and easy change management.

INTEGRATION

Start workflows based on external events. Leverage data from your ERP, CRM, SharePoint or any other third party system using webservices and built-in direct database connectivity.

BUSINESS RULES ENGINE

Control the behavior and logic of your applications with business rules. Modify them on the fly, nest and reuse to manage changes efficiently.

DOCUMENT MANAGEMENT

Use barcodes to streamline batch scanning. Register documents' metadata using OCR and AI-based content recognition. Generate and update Word, PDF, and Excel files whenever your processes need them.

Instinctively familiar UI

Achieve maximum efficiency with minimum training.

End-users love intuitive applications that help them in their day-to-day work. WEBCON BPS offers ready to use personal productivity tools so you can effortlessly enhance applications you build to make users' work more effective.

Self-explanatory forms, consistent design and unified user experience ensure great adoption rate. Surface your applications in SharePoint Server, and SharePoint online sites and pages, use them inside of Microsoft Teams and Outlook. Get you processes available at you fingertips with mobile iOS/Android apps or responsive sites for mobile over access.

Here is your winning recipe that exceeds users' expectations.

Change & maintain

Just like biathletes don't choose between shooting and running, IT departments need to both develop new applications and maintain the existing ones.

No more maintenance nightmares – everything you build in WEBCON BPS today will be easy to maintain, troubleshoot, and evolve, and ready for tomorrow.

Maintenance efforts are reduced to a minimum thanks to the **InstantChange™** technology assisted by self-documentation, neat error reporting and system performance monitoring.

WEBCON BPS offers a low learning curve for power users. This translates to business continuity insurance when faced with employee turnover.

One platform – endless possibilities

A single application development platform vs financing, managing, learning and maintaining multiple systems. From supportive to business critical, from departmental to global – WEBCON BPS enables our clients to deliver over 90% of all applications they need.
